Team 08

Meeting Minutes October 06, 2020

CSCI-P465/565 (Software Engineering I)

Meeting Attendees

Gopi Kiran (Primary Customer)
Disha Talreja (Secondary Customer)
Zachary Zirin
Leo Chen
Joshua Baker
Devansh Jain

General Meeting Info

Meeting Purpose: The aim of this meeting was to present the customers with progress that has been made during Sprint 01 of the project and also discuss the goals of the application for Sprint 02.

Start Time: 11:00 AM   **Stop Time**: 11:30 AM

New Business

The meeting was scheduled by the primary customer, and was aimed towards going over and discussing the team's performance in the past sprint and also deciding the goals for the upcoming sprint. The team presented the work that it was able to accomplish within the duration of Sprint 01.

As clarified in the project plan document, the aim for Sprint 01 was to be able to set up the deployment pipelines, setup authentication services, and also allow authorized users to create profiles on the application which will be linked to the custom database,

14/Sep/20 to 6/Oct/20 (Custom) ⌄   Refine report ⌄

and which is separate from the authentication server's database.

The team was successfully able to accomplish these tasks and then presented their work during the demo to the customers. The project was already deployed in the production environment and the demo was done in that environment.

The features that were tested during the demo were,

1. Sign Up Feature (both using username, email id and using social accounts)
2. Login Feature
3. Email Verification Feature
4. Forgot Password Feature
5. Email being sent on Forgot Password.
6. Resetting the password from the email.
7. Public View of the application
8. Other pages that have been setup as a part of skeleton for the application.

The customers also shared few ideas about how the team should start thinking about the additional features. The team was advised to keep up the momentum they have gained in the past sprint and build upon that during the Sprint 02 to accomplish more than just 1 feature.

Decisions Summary:

The core feature, Login, Registration and Create Profile of the application was presented to the customer.
The final decision over additional features is subject to change depending upon the team's decision.
